The SANUKEHL® preparations - a unique therapy option

When an infection with microorganisms (bacteria, fungi, viruses) or parasites occurs, a pathogen has managed to break through the first barriers of the immune system. They multiply and often spread throughout the body. The immune system is now running at full speed to fight the infection. In many cases, it does this without any problems, but the infection can also become a chronic process. There can be several reasons for this.

For example, if the immune system is weakened, many pathogens can retreat into niches within the body where they are later difficult for the immune system to reach. Furthermore, under various conditions (such as during/after antibiotic treatment), especially bacteria can develop differently - the bacteria now grow without a cell wall. These cell wall deficient (CWDs) forms of bacteria remain in the body and manage to establish themselves permanently in various tissues, organs, blood and within cells, sometimes over very long periods of time. In addition, they can multiply and even be passed on via the placenta (Domingue et al. 1997, 2010).

CWDs have now been detected in over 50 different medically significant bacterial genera as well as in *Candida*. And CWDs are probably also causally involved in many chronic inflammatory diseases, such as rheumatoid arthritis, lupus, cancer and autoimmune diseases (Markova et al. 2017, Onwuamaegbu et al. 2005).

CWDs and microbial metabolites are therefore a major challenge for the immune system. Especially in chronic diseases, they can cause therapy blockages. SANUKEHL® preparations offer - whether as individual medication or in combination with other SANUM remedies - a form of treatment which supports the elimination of CWDs and the elimination of microbial metabolic products.

SANUKEHL® Strep D6 Liquid Dilution

10 ml dropper bottle

Dosage: at the beginning 1x 1-2 drops each daily, later additionally 1x 1-6 drops orally, start low dosed.

Infections with streptococci are widespread and can affect various organs and tissues. The most common pathogen is certainly *Streptococcus pyogenes*, but other streptococci are also capable of causing an infection. Since the severity of many diseases often leads to the administration of antibiotics, there is always the risk of CWDs forming in these cases.

But not only acute streptococcal infections can be treated with SANUKEHL® Strep.

After an infection, especially with β -haemolysing streptococci, further diseases can develop. Various post-streptococcal diseases are known, such as

- acute rheumatic fever,
- post-streptococcal glomerulonephritis,
- inflammation of the heart valves or
- PANDAS (Pediatric Autoimmune Neuropsychiatric Disorders Associated with Streptococcal Infections).

These diseases are sometimes accompanied by very severe symptoms and often the first symptoms appear soon after the original infection. Sometimes, however, the patient's symptoms are also very unspecific and develop insidiously, sometimes even over years. For example, a few years after an infection, without further illness, poor kidney values, permanently elevated ASL (antistreptolysin) titers or unspecific joint complaints can develop. In these cases it is worthwhile to carry out a follow-up treatment of the original streptococcal infection with SANUKEHL® Strep D6 drops. If there is a suspicion that CWDs could also play a role, a combination with QENTAKEHL® has proven to be effective in practice.

QENTAKEHL® D5 Liquid dilution

10 ml dropper bottle

Dosage: 2x 5 drops daily

QENTAKEHL® is used to treat viral infections and intracellular infections.

Fields of application, effectiveness and tolerability

Online seminar

When worries and fears dominate our lives

We have set up a new section on our website where we present short online seminars on interesting topics in naturopathy. Register now on our homepage or log in.

Worries, stress and fears accompany every human being, especially in the present time.

Due to the ongoing problems, however, people can get into a long-lasting stress and anxiety situation from which they find it difficult to get out on their own. In this online seminar we will discuss what happens in the body during stress and how it reacts to permanent stress. In addition, naturopathic measures are presented to support patients who find themselves in such a situation.

Stay healthy.
