THROMBOSOL aktiv®

now new at Biofrid-Cosmetic

The tomato has always attracted and delighted people because of its bright red colour. When you consider that it is also called the apple of paradise, it is likely that it made hearts beat faster when you were given such a wonderful and rare fruit. Now who would have thought that it also has a medical influence on the cardiovascular system. Its valuable ingredients such as vitamins C and B, the high proportion of minerals (Ca, Fe, Mg, Na, P, K, Si) and secondary plant substances (lycopene, carotene, lutein, etc.) make it a sought-after food in addition to its delicious taste.

The healing effects of tomato extract have been attributed primarily to lycopene, which is further enhanced by the cooking process. The carotenoid lycopene is used especially for its antioxidant properties and its healing power for certain types of cancer.

Recent studies have now shown that, independently of lycopene, tomatoes have other powers that have a strong antioxidant effect on platelets. The tendency of platelets to clump is mainly attributed to the interaction of ADP (adenosine diphosphate), arachidonic acid and collagen. This triggers the release of PF4 (platelet agglutinating factor 4), which causes platelets to clump together. A water-soluble fruit extract obtained from the pulp flesh in the immediate vicinity of the tomato seeds can be used to reduce the release of PF4 and at the same time stimulate the synthesis of cAMP (cyclic adenosine monophosphate). This reaction is attributed to the nucleotides/nucleosides, polyphenols and flavonoids contained in the fruit extract close to the seeds. Among the latter, rutin, an important component of other medicinal plants with antithrombotic and vascular-stabilizing properties such as buckwheat or red vine leaves, is particularly noteworthy.

Remarkable is the relative heat resistance of the extract, so that both an aqueous preparation and a dried water-soluble powder form can be offered.

The company BIOFRID has opted for the encapsulated, powdered dosage form. One capsule of THROMBOSOL aktiv® contains 150 mg pure tomato extract. This corresponds to the daily amount recommended by the EFSA (European Food Safety Authority), which should be taken together with 200 ml warm water.

For the prophylaxis and therapy of blood flow disorders, THROMBOSOL aktiv®, in addition to MUCOKEHL® and SANUVIS® as well as V-Th-E KUHL mixture, represents a real enrichment.

THROMBOSOL aktiv®

Package size: 60 capsules,
available now

Thrombosol aktiv® and other food supplements are available in our online shop.

Hay fever?

LUFFASAN® for pollen defense -
Preservative-free, as a spray

Hay fever is widespread and occurs in early childhood, 15-30% are affected.

Among the most common symptoms of the allergic reaction are

- sneezing with itching and secretion or stuffy nose
- conjunctivitis
- hypersensitivity of the nose to certain stimuli, such as cold air, tobacco smoke and / or scents
- insomnia
- restriction of the ability to concentrate

Our LUFFASAN® nasal spray is available for treatment, the active ingredient can be used locally to support the treatment.

Free of preservatives!

Nasal spray

LUFFASAN® nose drops for spraying (20 ml dropper bottle)

Dosage: 2-3x 1 pump daily into each nostril

Stay in balance

with ALKALA®

New momentum for your acid-base balance

Over the course of the last few years, it has been increasingly understood that a good acid-base balance in the body is of enormous importance for health. If there are shifts in one direction or the other, the body reacts with a variety of (disease) symptoms. In some cases it is obvious that the acid-base balance is involved in the symptoms (e.g. heartburn), but in some cases it is only apparent at second glance (e.g. cellulite).

ALKALA® "N" Powder

150 g

ALKALA® "N" is a mixture of bases in the form of a powder. The main component is sodium hydrogen carbonate, further components are potassium hydrogen carbonate and sodium citrate.

The possible applications of ALKALA® "N" are quite varied. You can use one measuring spoon (ms) of ALKALA® "N" to measure if you want to make basic drink (if you suffer from e.g. heartburn or acid-related stomach problems) or you put 1-3 ms (depending on the amount of water) in a bowl of water for an alkaline footbath or also for alkaline wraps, e.g. for relaxation of aching joints or muscles.

ALKALA® "S" Powder

250 g

ALKALA® "S" contains tripotassium citrate, tricalcium citrate and trimagnesium citrate.

Magnesium, calcium and potassium belong to the most important minerals of the body. Potassium contributes to a normal function of the nervous system as well as normal muscle function. Calcium contributes to a normal energy metabolism and has a function in cell division and specialisation. Magnesium contributes to the maintenance of normal bones and teeth and to the reduction of Tiredness and fatigue. By taking ALKALA® "S" the body is given the opportunity to refill its mineral depots.

ALKALA® "T" Tablets

**20 St.
100 St.**

ALKALA® "T" contains sodium hydrogen carbonate in tablet form. Sodium hydrogen carbonate is the most important base in human body. For a long time now, it is traditionally used in acid indigestion and heartburn. The stomach acid is neutralized directly at the site of the problem.

Since ALKALA® "T" is available as a tablet, it can be taken along as an "immediate help" and you have a basic agent fast on hand in case of acid-related complaints.

SANUM-Base Cure

	1 st – 2 nd week	3 rd – 9 th week
ALKALA® "N" powder	in the evening, take 1 measuring spoon in 1/2 glass of warm water	
ALKALA® "S" powder		take 1 teaspoon in water or juice 1-2 x daily with a meal
ALKALA® "T" tablets	take 1-2 tablets as needed (max. 3/day)	

ALKALA® "S" and other food supplements are available in our online shop.

For further product information please refer to the respective packaging.
